A Additional Material **13**

List of Figures

4.1 High-level system architecture. 5

4.2 Replace with a real screenshot. 6

List of Tables

5.1 Example evaluation results. 7

Abstract

Summary

Write a 150–300 word abstract here: the problem, your approach, the main results, and your contribution. Keep it self-contained, with no citations.

Replace this paragraph with your abstract text.

Keywords: keyword one, keyword two, keyword three.

Chapter 1

Introduction

1.1 Background and context

Set the scene for your work. What field is this in, and why does it matter?

1.2 Problem statement

Problem Statement

State, in two or three sentences, the specific problem your project addresses.

1.3 Objectives and research questions

- **Objective 1:** ...
- **Objective 2:** ...
- **Research question:** ...

1.4 Scope and limitations

State what is and is not covered.

1.5 Document outline

This document is organized as follows. Chapter 1 introduces the problem; later chapters cover background, methodology, design, results, and conclusions. Related platforms have been studied before [1], and this work uses Machine Learning (ML) where appropriate.

Chapter 2

Background and Related Work

2.1 Key concepts

Define the concepts a reader needs, e.g. metadata and schema.

2.2 Related work / state of the art

Summarize the most relevant existing work and how it relates to yours [2, 3].

2.3 Gap and positioning

Explain where existing approaches fall short and how your project fits.

Chapter 3

Methodology

Describe your approach: methods, materials, tools, datasets, and why you chose them. State your evaluation plan (metrics, baselines) in enough detail that someone could reproduce the work.

Chapter 4

Design and Implementation

4.1 Design

Describe the design of your system or study. Use a diagram for structure — this one is a TikZ file in `diagrams/` inserted with `\adddiagram`:

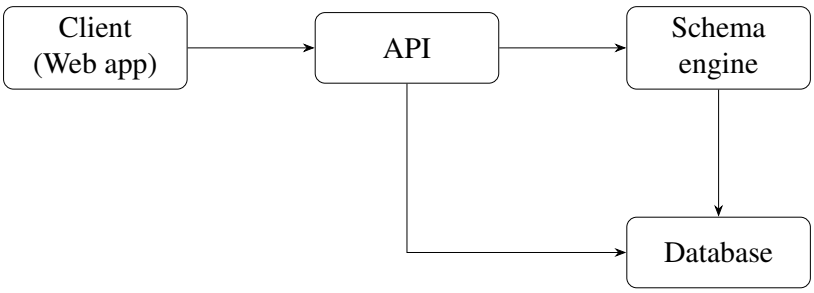

Figure 4.1: High-level system architecture.

As shown in Figure 4.1, the client talks to an API, which uses a schema engine over the database.

4.2 Implementation

Describe key implementation decisions and challenges. Insert screenshots or photos with `\addimage` (file in `images/`, width as a fraction of the text width):

Figure 4.2: Replace with a real screenshot.

Chapter 5

Results

5.1 Experimental setup

Describe the data, metrics, baselines, and environment.

5.2 Results

Present results in tables and figures, and report them honestly.

Table 5.1: Example evaluation results.

Method	Metric A	Metric B
Baseline	0.70	0.65
Ours	0.82	0.79

Table 5.1 shows that the proposed approach improves over the baseline.

5.3 Analysis

Interpret the results: what do they mean, and why?

Chapter 6

Conclusion and Future Work

6.1 Conclusions

Summarize your contributions against the objectives stated in Chapter 1. Do not introduce new results here.

6.2 Limitations

State the honest limitations of the work.

6.3 Future work

- ...
- ...

Bibliography

List of Abbreviations

API Application Programming Interface.

DB Database.

ML Machine Learning.

Glossary

metadata data that describes the structure or meaning of other data.

schema the definition of the collections, fields and relations that make up a database.

Appendix A

Additional Material

Put supplementary material here: full code listings, extra tables and plots, questionnaires, or raw data. Each appendix can be its own `\chapter` (they are lettered A, B, C… after `\appendix`).
